

How-to: Clearing Site Cache/Cookies

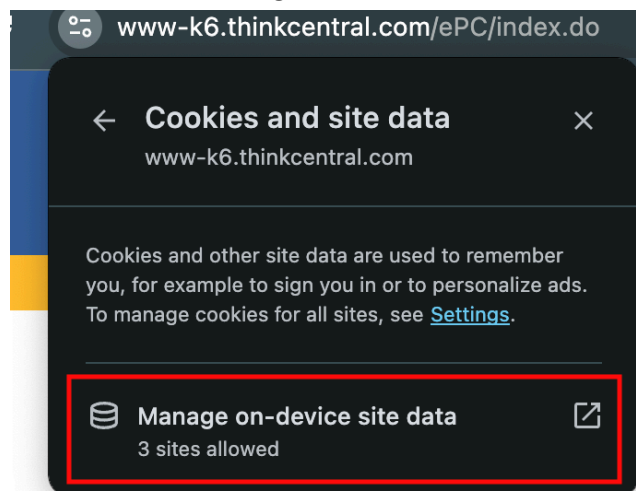

1. Navigate to the site that is giving you problems (in this case I am using Think Central) and click on the little icon next to the address.

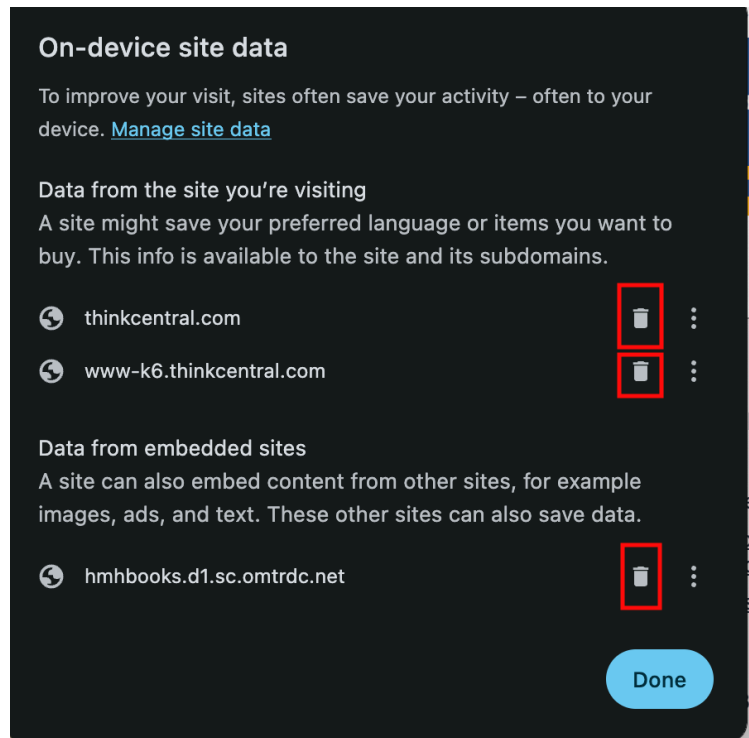

2. Then select "Cookies and site data"

3. Click on "Manage on-device site data"

4. Then click on each trash icon and then click “Done”

5. The window will close and then click “Reload” near the address bar.
